Boat _____ Size _____ Year _____

Spreader Length: Lower _____ 2nd _____ 3rd _____

The control lines must be clear of the spreadertips. To avoid going up, reach as high as possible and measure from the mast track to the upper shroud if one set of spreaders.

Otherwise, hoist up something about 4.5' (1.5m) long with reference marks and a downhaul, or find or make temporary marks on the sail, raise, and check.

Then answer the following questions:

How easy is it to reach sail? Easy _____ Okay _____ Hard _____

Halyard or boom topping lift? Halyard _____ Boom _____
